Business Development Director, John Lumb talks about the new Virus Risk Indicator

Our Business Development Director, John Lumb talks about the new Virus Risk Indicator, recently launched by our Indoor Air Quality (IAQ) partners, Airthings.

Evotech was involved in the testing and development of this useful tool which helps ensure optimal working environments are achieved to reduce the spread of viruses. The algorithm developed by the CERN scientists at Airthings is incorporated into the dashboard of their Indoor Air Quality monitoring solution and provides alerts when air, humidity and pollution exceed safe parameters that can increase the risk of viruses spreading in a building.
