

Evotech awarded gold status

Evotech, is delighted to announce that it has been awarded Constructionline Gold level status, a nationally recognised accreditation within the construction procurement sector.

Successfully achieving this highly sought after accreditation involved rigorous assessments in areas including health & safety, environmental and quality management, diversity and equality, and comes as a result of Evotech's commitment to achieving best practice throughout its operations.

Managing Director, Mark O'Grady says, "Health and safety processes and training is crucial in our industry to help keep both staff and building occupants safe from harm. Constructionline Gold demonstrates to customers that our organisation has been subjected to increased scrutiny around governance and risk management. We're committed to continuously improving health and safety standards across our business, and this gold level accreditation provides our clients with peace of mind that we're a safety conscious company, that is committed to sustainable and ethical best practice."

Constructionline is just one of three health and safety accreditations Evotech holds and is independently assessed for annually, with SafeContractor and CHAS making up the trio. In addition, the company holds internationally recognised certification in ISO 9001:2015 for its quality management system and ISO 14001:2015 for its environmental management system. The Gold Level certification shows that the business meets industry standards, including PAS 91 and the Common Assessment Standard, and pre-qualifies across core assessment modules required by public and private sector buyers.

Evotech provides mechanical and electrical maintenance services for many landmark buildings including commercial office space, shopping centres, leisure complexes and rented residential developments across the UK. Specialising in building performance optimisation, the business is passionate about lowering a building's energy usage and carbon footprint, whilst creating optimised spaces that foster wellbeing and productivity.
